OPERATING INSTRUCTIONS

Unpacking and Assembly

After unpacking your PEANUT ROASTER, set it on a counter where you intend to use it. Remove all tape. Inspect the unit for any damage, which may have occurred in transit. Damage claims should be filed immediately with the transportation company.

NOTE:

Locate the ROASTER on a base that is strong enough to safely support 120 lbs.

Electrical Specifications:

120/208 or 120/230 Volts~, 60Hz, 3250 Watts

Features:

- Stainless Steel Construction – EZ Klean Cook Surface
- 10 lb. Capacity

Tips:

All nuts cook differently. Depending on moisture content and size of nuts, preparation times vary. Nuts will continue to cook as they cool in the holding pan. Trial and error will make this a very easy process.

Directions:

Turn both switches on and preheat the unit for approximately 15 minutes. Load 10 pounds of peanuts into the top loading chute and close loading door. After approximately 30 minutes slide open the sampling window and allow a couple nuts to tumble out. Remove the nut from the shell and examine the nut. When the skin flakes off and the nuts begin to change color from milky white to tan it is time to dump. Turn off the heat switch but leave the motor running. Open the bottom dump door and allow nuts to dump into a cooling pan. Nuts will continue to roast as they cool.

Cleaning:

Do not attempt to clean roaster until unit is completely cool. (Approximately 2 hours) Clean the inside of drum, when cool with dry paper towels. Clean the outside of the unit with concession cleaner. Empty the chaff bin every two batches. It is located behind the dump door under the end of the drum. (Magnets hold it down so pull firmly to remove. Chaff bin will be hot!)
